v0.7 | How AI changes urban form: six reversible physical interfaces

ordinary city baseline → physical impact → optional AI → functioning end state

Shared principle: AI is not an eighth level-use category, it enables spatial interfaces that can start, stop and be replaced.
Example only: all elements accompanying interfaces require their activation.

Mobility + blue-green | different reality, different spatial response

Fixed reviewer input: east-west links are no longer drawn as one generic condition. Public evidence matters only when it changes a spatial decision.

AI alignment remains conceptual relationships: no road surface, bridge/hovered scheme, active exit, flexibility or approved control plan is claimed.

Jing-Zhang City Completeness v0.5 | Public-Space Component Library + Three-Layer We

Design goal: generate a city plan to build a permanent public space system, a shared public space system, a shared public space system, a shared public space system.

Concept proposal • design-first • provisional geometry is not an official redline

--	--	--

This table states conceptual quantity bases, roles and maintenance cadence only. Currency budgets, total FTE, procurement entities, insurance contracts and approvals remain UNKNOWN.

Shared decision gate: PRECONDITION – TEST – RECEIPT – DECISION

Shared boundary: if reasonable parties, periods, safety, insurance, no state forces or 50% conditions cannot be verified, the proposal remains a concept proposal, no take budget, partnership or schedule file is gap.

Concept only implementation framework. Provisional geometry is non-official and is not a procurement, approval, contract or construction basis.

Concept proposal • design-first • provisional geometry is not an official redline
